Part Number: LA504816

Installs between the Analog Input terminal plug and its socket on a dw250 Series controller.
Includes terminals: 24VDC, 0V, AI1 to AI8.

Provides 500Ω, 0.1% load resistors between 0V and each analog input terminal AI1 to AI8 on a dw250 series controller to give 8 x 4-20mA inputs.

1. The resistors can easily be removed to revert to +/-10V inputs as required.
2. A 4-20mA function block is available in the Utilities Library in savvy configuration tools to make the terminal conversion easy in the controller function block diagram.

The 4-20mA FB will include:

- Conversion from 4-20mA input to 0-100%
- Out of range / wire break alarm.
